

Providing independent strategic clinical advice

EVALUATION

STP/Senate Engagement Event

12th May 2017, Whittle Suite, Haydock Park Racecourse

1. Did the event meet your expectations – **100% - Yes**

COMMENTS:

- Exceeded them!
- More than met it, really good event
- I didn't expect as much interaction and that was good
- Morning session on communicating to public and the political perspective excellent – afternoon presentations on STPs rather flat in comparison

2. Did you gain a local overview of STPs across Cheshire & Merseyside / Lancashire & South Cumbria / Greater Manchester

■ Yes ■ No

COMMENTS:

- Similar problems but different solutions and at different stages
- All STP presentations were rather bland stating the obvious lacking detail or any innovative options

3. Did you gain an understanding of the North West Senates – **100% - Yes**

COMMENTS:

- A little, not sure it has to be such a large footprint, but good to share ideas

4. How do you think Senates can support STPs effectively in the future

COMMENTS:

- Bringing together a multi-professional community to learn and share together
- Senates have a pivotal role in confirming the evidence base required for substantive change in secondary and tertiary healthcare provision. Where this is done well, constructive consultation and dialogue with the public and workforce can take place where the evidence can provide the necessary assurance / reassurance necessary for system change
- Input into service transformation plans
- Providing support and advice on the feasibility of plans
- Reviewing aspects of change, being a critical friend and sharing good practice with other areas
- Be asked to review specific proposals

5. Are there any specific topics you would like future Senate events to focus on?

COMMENTS:

- Approaches to robust engagement across health and care workforce
- Ensuring early intervention and prevention are inherent in any proposed change to clinical services and practice
- How to ensure the enhanced role of the “empowered patient” in any proposed significant changes to clinical provision and system design
- Discussion on specific key areas e.g. mental health, primary care, emergency care
- Mainstreaming Genomics
- Service reconfiguration in Manchester of secondary care with the merged hospital (if approved). How well pathways integrated with Primary Care

6. Would you like to make any other comments/feedback?

COMMENTS:

- Really enjoyed the day
- I thought the event was excellent, really informative
- It was enjoyable and instructive. Good speaker from London (or was it Scotland)
